

# Carpet Cleaners

## Help protect water quality in our community

**Dispose of dirty carpet cleaning water the right way. Never dump it into streets, alleys, parking lots or catch basins that lead to storm drains or washes.**

Henderson Municipal Code 14.09 requires proper disposal for water used to clean carpets and other materials. Process water must be disposed of through an approved plumbing device.

The City of Henderson allows the discharge of carpet cleaning wash water into the sanitary sewer system as long as it is non-hazardous. The carpet cleaning wastewater should be filtered before discharge to the sanitary sewer because fibers and other debris in the wastewater can clog pipes. You can discharge the filtered water via a sink, toilet, tub, or sewer clean-out without an Industrial Wastewater Discharge Permit. The solid residue from filtration generally can be disposed of in the garbage.

A cleanup involving a toxic or hazardous material has specific cleanup and disposal requirements, and disposal of these contaminants to the sanitary sewer system or in the garbage may be illegal.
